

The beamline for tomography at SESAME in Jordan will serve user communities in the Middle East.

Research domains include cultural heritage and archaeology, health and biomedicine, geology, materials research and engineering.

From the end of 2022, scientists will benefit from access to a state-of-the-art beamline close to the source of samples or remains to be analysed.

BEATS receives funding from the European Union Horizon 2020 research and innovation programme under the grant agreement number 822535.
